See reverse for installation instructions.
1. FOUNDATION

Compacted Gravel Base: Place and uniformly compact the gravel base (0-3/4" crushed stone). Dense-graded aggregate base should be compacted using a vibratory plate compactor or hand tamper. A 4" thick gravel base is recommended and should extend beyond the Highland Stone® a minimum of 3" on each side. The top of the leveling pad should be at least 3" below grade.

Concrete Base or Concrete Pavers: Place Highland Stone® directly on a concrete base or concrete pavers. Make sure to fill the bottom of the fire pit with a layer of sand (3" minimum) to ensure proper drainage.

2. BUILDING ADDITIONAL COURSES OF BLOCK

Make sure the first layer of block is perfectly leveled before building additional courses. Using concrete approved adhesive glue the second row of blocks to the first row. It is important to stagger the joints as much as possible on every course. Make sure not to line up the two small units on top of the others below. There are enough units to build 7 layers of block which would make the fire pit roughly 21" tall plus coping.

**For packaging, there are two extra of each unit provided in the kit.

3. INSTALLATION OF WEATHERED CAP & OPTIONAL METAL FIRE RING

Once the fire pit is at the desired height, use a concrete adhesive to secure the four radius cap units. Add crushed stone or lava rock to raise the fire bed up to preferred height.

If you choose the optional metal fire ring, please insert before capping the fire pit.

Safety Tips:

- The fire pit is for outdoor use only.
- Make sure to assemble the fire pit a minimum distance from surrounding structures and make sure nothing is directly above the fire pit that is a potential fire and/or injury hazard.
- Before beginning installation, please contact your municipality to obtain information for fire pit installation regulations. It is very important to check local codes!!
