

OUR EASY TO INSTALL DUBLIN[™] FIRE PIT KIT IS A SIMPLE WAY TO ADD WARMTH AND A COZY ATMOSPHERE TO YOUR PATIO OR BACKYARD. Just about anyone can install the Dublin[™] Fire Pit Kit, but because there is lifting, hauling, digging, and cutting involved, it is important to wear work gloves, knee pads, a back support belt, safety glasses, and ear plugs, as well as to practice proper lifting techniques.

SQUARE DUBLIN FIRE PIT

STEP 1: START WITH THE BASE

Dig an area that extends 4" wider than the fire pit, and 2" below the surface. Add gravel and compact the surface until it is level and flush with the ground. If you are setting the fire pit on pavers, then place the pit directly onto the surface and add 2–3" of sand to allow for proper drainage.

STEP 2: LAY TIER 1

Using the diagram below, lay out 16 blocks in a square design so that the inside diameter is 56" x 56". Make sure that this is level and brush the top of the block. For extra stability, apply a small bead of concrete adhesive to this tier and to every subsequent tier hereafter.

STEP 3: LAY TIERS 2 & 3

Reverse the Tier 1 pattern and lay Tier 2 using 16 blocks (add adhesive if desired). Repeat this step for Tier 3 (add adhesive if desired). The tier reversal is done to offset the joints, thus giving a better look to your fire pit.

STEP 4: CAPPING

Place 24 blocks perpendicular to the other tiers. This creates the cap for the fire pit. Start on one corner and place 6 blocks. Turn the block 90 degrees and place 6 more. Continue for the remaining two sides. Remove each cap one by one, apply adhesive to the top of Tier 3, and reset the cap. Continue doing so until you have glued all of the cap block in place. NOTE: Even if the previous tiers were not glued, Eagle Bay highly recommends gluing the caps to keep them in place.
